Object: Application for a part-time position in computer development

Dear Madam, Sir,

I am currently in my second year of the Grande Ecole program at EPITECH Mulhouse, and I am looking for a part time position that will start at the end of September 2023 until March. During this time, I would be able to come work every Thursdays and Fridays, and starting March converting into a full-time internship until August.

During my first year at EPITECH, I discovered several programming languages, but I especially practiced coding in C through rigorous exercises and team projects. At the beginning of my second year and during my first internship at Apliko, I discovered new languages such as Vue.js and HTML/CSS and learned to work in a fast-paced start-up environment. At the end of my second year at EPITECH, I will discover other coding tools such as C++, haskell and assembly and continually grow my knowledge base.

Given your company's impact in the pharmaceutical industry, its global recognition, and the many innovative technologies used within your company to innovate in areas of medical need, I am ready to provide my best to help you develop your tools and grow your productivity and advancement. What really interests me a lot in your company is the ability it has to make the world a more sustainable and fairer place thanks to science and technology.

Passionate, dynamic, organized and a good listener, I am ready to contribute my knowledge to your company and make myself useful, while continuing to develop my personal and technical skills. I am really motivated by this opportunity within your team to be able and discover new fields around computer science, a passion of mine since I was very young.

I remain at your disposal for any further information and am available to come meet you physically or virtually.

Thank you for taking the time to read this letter and for considering my application,

Oscar FRANK
